## ProLock

The ProLock is a flexible locker solution that allows managed distribution of bulk consumables, tooling and other valuable assets such as reusable safety clothing and helmets, hand tools, calibrated tools, gauges and power tools.

ProLock is an access-controlled, flexible locker solution managed by the CribMaster Inventory Management System software. With ProLock, you can overcome the challenges associated with tool distribution within your facility.

The ProLock lockers come standard with clear fronts and white interiors for easy visibility of inventory. As your operation grows or you need to expand your control to other areas, ProLock lockers can simply connect to each other to create an expandable bay of cabinets.

### Features and Benefits

- Ease of access.
- Issues and returns.
- Reduce tool losses.
- Enforceable restrictions based on calibration and certification.
- Fully flexible locker configuration.
- Manage Serial ID items and kits.
- Monitor calibrated items and schedules.

The ProLock locker configuration is a standard 24-door format that is field-configurable by simply linking the doors of each locker together and removing shelves. This allows lockers to be easily configured for larger tools and tool kits.

### Specifications

W 870 mm | H 2110 mm | D 940 mm | 233.6 kg

\*Shelf capacity up to 23 kg

### Accessories

- Accessible power strip with 24 outlets allowing for a charging station within a ProLock.
- LED lights for enhanced visibility.

### Expansion Compatible (Scalable)

The ProLock is a scalable solution offering the ability to add up to two additional lockers, carousels or a combination of both to expand locker capacity.
